Branch: REC

Department: I AIML AD

Batch: 2028

Degree: B.E - AI & ML

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 7_COD_Question 2

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

Input Format

The first line contains two integers, n and table_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

Output Format

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5 10
21 31 41 51 61
3
31 60 51
Output: Value 31: Found
Value 60: Not Found
Value 51: Found
Answer
#include <stdio.h>
#define MAX 100
void initializeTable(int table[], int size) {
  for (int i = 0; i < size; i++) {
     table[i] = -1;
  }
}
int linearProbe(int table[], int size, int num) {
   int index = num % size;
  int originalIndex = index;
while (table[index] != -1 && table[index] != num) {
     index = (index + 1) \% size;
```

```
if (index == originalIndex) // Table full or all slots checked
         return -1;
    return index;
 void insertIntoHashTable(int table[], int size, int arr[], int n) {
   for (int i = 0; i < n; i++) {
      int idx = linearProbe(table, size, arr[i]);
      if (idx != -1) {
         table[idx] = arr[i];
int searchInHashTable(int table[], int size, int num) {
  int index = num % size;
  int originallad
   int originalIndex = index;
   while (table[index] != -1) {
      if (table[index] == num)
         return 1;
      index = (index + 1) \% size;
      if (index == originalIndex)
         break;
   }
    return 0;
int main() {
    int n, table_size;
   scanf("%d %d", &n, &table_size);
   int arr[MAX], table[MAX];
   for (int i = 0; i < n; i++)
      scanf("%d", &arr[i]);
   initializeTable(table, table_size);
   insertIntoHashTable(table, table_size, arr, n);
   int\q, x;
   scanf("%d", &q);
  for (int i = 0; i < q; i++)
      scanf("%d", &x);
```

```
if (searchInHashTable(table, table_size, x))
printf("Value %d: Found\n", x);
else
                                                                                      241501081
                                                         24,150,108,1
             printf("Value %d: Not Found\n", x);
        }
        return 0;
                                                                               Marks: 10/10
